

# BenePrecise<sup>®</sup>

Personalized medicine. Better outcomes. Smarter spend.

## 40%

40% of prescriptions don't work as intended.\*

## 16%

16% of total health care spend is wasted as a result.\*

## 90%

90% of people carry a genetic mutation that impacts how their body processes certain drugs.\*

Medication effectiveness isn't guaranteed. Interactions with other drugs, supplements, or even certain foods can cause complications. Some medications may be unsafe if members have chronic conditions, are pregnant, or fall within certain age groups.

Genetics add another layer of complexity—over half of commonly prescribed medications can be impacted by genetic variations. These critical factors often aren't visible to physicians or pharmacies without advanced testing.

BenePrecise<sup>®</sup>, BeneCard PBF's pharmacogenetics (PGx) program, works behind the scenes ensuring safer, more effective therapy by personalizing treatment based on your members' unique genetic profiles.

## How BenePrecise<sup>®</sup> Works

-  **Painless**  
An easy-to-use cheek swab test reveals how a member's body processes medications.
-  **Automatic Screening**  
Every new or existing prescription is reviewed for potential risks.
-  **Personalized Guidance**  
If concerns arise, a BeneCard PBF pharmacist collaborates with your members and their prescribers to select the safest, most effective therapy.
-  **Genetic Insight**  
Members receive a test kit; the results reveal how their bodies process medications—helping providers choose the right drug and dose the first time.
-  **Lifetime Value**  
Genetics don't change—your results last a lifetime. Future prescription requests align with the member's pharmacogenomic profile. Plus, our point-of-sale (POS) protection automatically blocks unsafe or ineffective drugs from being dispensed at the pharmacy.\*\*

\*\* POS screening on future medications will only include medications that were part of the PGx panel of drugs at the time of pharmacogenetic testing.

A recent study found that for every 10,000 covered lives, BenePrecise® delivers measurable improvements:

**49 ✓**

Emergency department visits  
were reduced by 49, annually.\*

**107 ✓**

Inpatient days were  
reduced by 107, annually.\*

**\$3.1 M ✓**

Medical costs were reduced  
by \$3.1 Million, annually.\*

## FAQs

**Q: Who has access to BenePrecise®?**

A: The program is accessible to all clients, regardless of member count.

**Q: How is testing done?**

A: A painless cheek swab is collected and mailed to the lab for processing.

**Q: What can be seen from the DNA test?**

A: Our genetic analysis focuses only on DNA segments known to affect drug metabolism. We do not assess identity, ancestry, disease risk, or unrelated traits. Member data is protected under strict privacy protocols and shared only with them and their healthcare providers with their explicit consent.

**Q: How does PGx improve care?**

A: It replaces the one-size-fits-all approach with personalized prescribing, reducing trial-and-error, side effects, and unnecessary costs.
